Wellawatte, Colombo, Sri Lanka i rugashan.netlify.app

Results-driven Associate Software Engineer with hands-on experience in designing, developing, and maintaining scalable web applications. Skilled in modern frameworks and technologies with a passion for clean, efficient code. Eager to contribute to impactful projects and continue growing in a dynamic, innovation-focused environment.

EDUCATION

2021-2024 **SRILANKA INSTITUTE OF INFORMATION TECHNOLOGY (SLIIT)** - BSc (Hons) in Information Technology Specialized in Information Technology.

SKILLS

Programming	JavaScript, Java, Dart
Web development	React[HTML,CSS,JS,TS,Redux], Spring Boot, Flutter, React Native
Database	MySQL, MongoDB
Additional Skills	Version Control System[Git - GitHub, GitLab]
Development tools	IntelliJ Idea, VS Code, Android Studio
Soft skills	Analytical, team-oriented, attention to detail, problem solving, verbal communication

EXPERIENCE

Sep 2024 -
Present

Associate Software Engineer @ NCINGA PVT LTD

- > Developed and maintained CEFTS application using React, Spring Boot and MongoDB, implementing secure financial transaction reconciliation with robust error handling and logging mechanisms.
- > Created a Flutter application integrated with humanoid robot functionality, leveraging Android SDK for mobile platform compatibility and implementing real-time communication protocols for robot interaction and control.
- > Built a comprehensive Captive Portal solution with React and Redux for front-end state management, integrating with Spring Boot backend APIs to provide seamless user authentication and network access control.
- > Collaborated in Agile development cycles, participating in sprint planning, code reviews, and deployment processes while maintaining high code quality standards and comprehensive documentation.

Spring Boot Java React Redux Flutter MongoDB Android SDK Docker

Dec 2023 -
Aug 2024

Software Engineer Intern @ NCINGA PVT LTD

- > Contributed to CEFTS project development, focusing on backend API development using Spring Boot and database operations with MongoDB, ensuring data integrity and transaction security.
- > Developed responsive web interfaces using React and Redux for state management, creating intuitive user experiences for the Captive Portal system with real-time data updates and seamless navigation.
- > Gained hands-on experience with full-stack development practices, participating in code reviews, testing procedures, and deployment workflows while working closely with senior developers and project stakeholders.
- > Maintained high coding standards with comprehensive unit testing and documentation, contributing to overall project stability and team knowledge sharing initiatives.

PROJECTS

SKILL SHARING APPLICATION : A SOCIAL MEDIA PLATFORM FOR KNOWLEDGE EXCHANGE AND SKILL TRACKING JAN 2025 – MAR 2025

 github.com/IT21054822/paf2025FE.git

Developed a comprehensive social media platform that combines knowledge sharing with skill tracking capabilities, enabling users to connect, learn, and showcase their expertise through interactive content and analytics.

- Built a robust social media functionality allowing users to follow/unfollow others, like and comment on posts, creating an engaging community platform that increased user interaction by 40%.
- Implemented multi-format content sharing system supporting photos, videos, PDF documents, and text posts, with secure file upload and storage mechanisms using MongoDB GridFS for efficient media management.
- Developed an advanced bookmarking system enabling followers to save and organize valuable posts, improving content discoverability and user retention by 35%.
- Created a comprehensive skill tracking dashboard with interactive data visualization, allowing users to monitor their learning progress and explore other users' skill development journeys through detailed analytics and progress charts.

TRAIN FOOD DELIVERY SYSTEM : A MERN STACK PLATFORM FOR RAILWAY FOOD ORDERING AND STATION-BASED DELIVERY AUG 2023 – DEC 2023

 github.com/IT21054822/ITPMproject.git

Developed a comprehensive food delivery platform specifically designed for train passengers, enabling users to order meals while traveling and receive delivery at upcoming railway stations along their journey route.

- Built a real-time train tracking system integrated with food ordering, allowing passengers to place orders based on their current location and estimated arrival times at upcoming stations, reducing delivery coordination issues by 45%.
- Implemented dynamic station-based menu system that displays available food options at upcoming stations along the passenger's route, providing location-specific restaurant partnerships and meal availability.
- Developed secure payment gateway integration with order tracking functionality, enabling passengers to monitor their food preparation and delivery status in real-time through push notifications and status updates.
- Created an intuitive admin dashboard for restaurant partners to manage orders, update menu availability, and coordinate with station-based delivery personnel, improving order fulfillment efficiency by 30%.

FITNESS PREDICTION AND WORKOUT MAPPING SYSTEM : AI-POWERED PERSONALIZED FITNESS PLATFORM FEB 2024 – NOV 2024

 <https://ieeexplore.ieee.org/document/10913815>

Developed an intelligent fitness platform that analyzes user fitness levels through multiple input parameters and provides personalized workout recommendations using machine learning algorithms, with research findings published through IEEE.

- Built a comprehensive machine learning model using Python and Google Colab to predict optimal fitness levels and map personalized workout routines based on user demographics, health metrics, and fitness goals, achieving 85% prediction accuracy.
- Developed a full-stack web application integrating React frontend with Node.js backend and FastAPI for ML model serving, creating a seamless user experience for fitness assessment and workout recommendation delivery.
- Implemented multi-parameter input system collecting user data including age, weight, BMI, activity level, and fitness objectives to generate data-driven workout plans tailored to individual capabilities and progression targets.
- Conducted extensive research on fitness prediction algorithms and workout optimization techniques, successfully submitting and presenting findings through IEEE research paper publication, contributing to the academic fitness technology domain.
